Contents

Aim and Scope of the Book

I AN OVERVIEW OF EVOLUTIONARY BIOLOGY

1 The History of Evolutionary Biology: Evolution and Genetics
2 The Origin of Molecular Biology
3 Evidence for Evolution

II THE ORIGIN AND DIVERSIFICATION OF LIFE

4 The Origin of Life
5 The Last Universal Common Ancestor and the Tree of Life
6 Diversification of Bacteria and Archaea. I: Phylogeny and Biology
7 Diversification of Bacteria and Archaea. II: Genetics and Genomics
8 The Origin and Diversification of Eukaryotes
9 Multicellularity and Development
10 Diversification of Plants and Animals
11 Evolution of Developmental Programs

III EVOLUTIONARY PROCESSES

12 Generation of Variation by Mutation and Recombination
13 Variation in DNA and Proteins
14 Variation in Genetically Complex Traits
15 Random Genetic Drift
16 Population Structure
17 Selection on Variation
18 The Interaction between Selection and Other Forces

19 Measuring Selection
20 Phenotypic Evolution
21 Conflict and Cooperation
22 Species and Speciation
23 Evolution of Genetic Systems
24 Evolution of Novelty

IV HUMAN EVOLUTION

25 Human Evolutionary History
26 Current Issues in Human Evolution

Figure Credits *Note:* Permissions for use of the images shown in these page proofs are in process.

Detailed Contents

Preface

Aim and Scope of the Book
- Evolutionary Biology Describes the History of Life and Explains Why Organisms Are the Way They Are
- Evolutionary Biology Is a Valuable Tool
- Molecular Biology and Evolutionary Biology Are Overlapping Fields of Study

I AN OVERVIEW OF EVOLUTIONARY BIOLOGY

1 The History of Evolutionary Biology: Evolution and Genetics
- A Brief Summary of Modern Genetics and Evolution
- Evolution before Darwin
- Charles Darwin
- The Eclipse of Natural Selection
- The Evolutionary Synthesis

2 The Origin of Molecular Biology
- The Beginnings of Molecular Biology
- Evolutionary and Molecular Biology: A New Synthesis?

3 Evidence for Evolution
- Evidence for Evolution
- Objections to Evolution
- Science and Society

II THE ORIGIN AND DIVERSIFICATION OF LIFE

4 The Origin of Life
- When Did Life Begin on Earth?
- How Did Life Begin on Earth?

5 The Last Universal Common Ancestor and the Tree of Life
- Tracing Early Evolutionary History
- Universal Homologies, LUCA, and the Tree of Life

6 Diversification of Bacteria and Archaea. I: Phylogeny and Biology
Introduction to the Bacteria and Archaea
Phylogenetic Diversification of Bacteria and Archaea
Biological Diversification of Bacteria and Archaea

7 Diversification of Bacteria and Archaea. II: Genetics and Genomics
The Nature of Archaeal and Bacterial Genomes
Lateral Transfer of DNA

8 The Origin and Diversification of Eukaryotes
Introduction to the Eukaryotes
Endosymbioses Have Played a Key Role in the Evolution of Eukaryotes
Structure and Evolution of the Nuclear Genome
Eukaryotic Diversification

9 Multicellularity and Development
How Multicellularity Happens
Division of Labor through Differentiation
Diversity of Body Plans
Genetics of Building a Body Plan

10 Diversification of Plants and Animals
Fossilization and Geological Time
The Flow of the Evolution of Life-forms
The Next 500 Million Years—Life Since the Cambrian Period
Patterns of Evolution

11 Evolution of Developmental Programs
Anterior–Posterior Patterning: *Hox* Gene Regulation of Development and Evolutionary Change
Hox Genes Are Shown to Be Involved in Evolutionary Change
Skeletal Evolution in Sticklebacks
Evolution of Maize from Teosinte
Universality of Developmental Systems

III EVOLUTIONARY PROCESSES

12 Generation of Variation by Mutation and Recombination
Mutations and Mechanisms for Their Generation
Protection, Prevention, and Correction Mechanisms Limit the Number of Mutations Caused by DNA Damage and Replication Errors
Rates and Patterns of Mutations
Generation of Variation by Mixing: Sex and Lateral Gene Transfer

13 Variation in DNA and Proteins
Genetic Variation
Types of Genetic Variation

14 Variation in Genetically Complex Traits
Introduction to Quantitative Traits
Analyzing Quantitative Variation
The Genetic Basis of Quantitative Variation
Generation of Quantitative Variation

15 Random Genetic Drift
Evolution is a Largely Random Process
Random Drift of Allele Frequencies
The Neutral Theory
Recombination and Random Drift

16 Population Structure
Gene Flow
Gene Flow Interactions with Other Evolutionary Forces
Genealogies in Structured Populations

17 Selection on Variation
The Nature of Selection
Selection on Quantitative Traits
Selection on Multiple Genes

18 The Interaction between Selection and Other Forces
Selection and Random Drift
Selection and Gene Flow
Balancing Selection
Mutation and Selection

19 Measuring Selection
Direct Measurement of Selection
Indirect Measurement
Selection on Linked Loci
Selection on Noncoding DNA
The Extent of Selection

20 Phenotypic Evolution
Evolutionary Optimization
Aging
Evolutionary Games
Sexual Selection

21 Conflict and Cooperation
Social Evolution
Conflict between Genes
Interactions between Relatives
Evolution of Cooperation

22 Species and Speciation
Defining Species
The Genetics of Speciation
Mechanisms of Speciation
The Geography of Speciation

23 Evolution of Genetic Systems
Studying the Evolution of Genetic Systems
Evolution of Mutation Rates
Evolution of Sex and Recombination
Consequences of Sex
Evolution of Evolvability

24 Evolution of Novelty
The Basic Features of Novelty
Changes in the Activity of Gene Products
Changes in Gene Regulation and Interactions within a Network: Targeting, Differentiation, and Development
Redundancy
Robustness, Modularity, and Compartmentalization
Acquiring New Functions from Other Species: Gene Transfer and Symbiosis
Natural Selection over Long Periods of Time Leads to the Origin of Novelty

IV HUMAN EVOLUTION

25 Human Evolutionary History
Placing Humans on the Tree of Life
The Evolution of Hominins
Genetics and Human Evolution
Genomics and Humanness

26 Current Issues in Human Evolution
The Genetic Basis of Disease
Understanding Human Nature

Glossary
